

Symbiosis Institute of Technology, Nagpur

DEPARTMENT OF COMPUTER SCIENCE • JAVASCRIPT PROGRAMMING LAB

Student: Tanmay Sankulwar

PRN: 24070521058

Course: Semester V (B.Tech)

Experiment No. 1

Student Name: Tanmay Sankulwar

PRN: 24070521058

File Path: EXP1/index.html , EXP1/script.js

Experiment Title

SIT NAGPUR | Student Registration (Student Information Portal)

Software / Tools Required

1. Visual Studio Code / Antigravity IDE
2. Google Chrome (or modern web browser)
3. HTML5
4. CSS3
5. JavaScript (ES6)

Experiment Program Code

Task 1.a — Student Information Form and Dynamic Result Table

File: EXP1/index.html

The HTML document creates a centered, card-based interface containing inputs for student credentials (Name, Age, PRN, Contact Number, Email, and Address), a submission button, an initially hidden results table, and author credits.

```
<!DOCTYPE html>
<html lang="en">

        <p><b>Developed By</b></p>
        <p><b>Tanmay Sankulwar</b></p>
        <p>PRN : <b>24070521058</b></p>
    </div>
</div>
<script src="script.js"></script>
</body>
</html>

```

Task 1.b — Form Validation and Dynamic DOM Binding

File: EXP1/script.js

The JavaScript logic extracts values entered into each input element via `document.getElementById()`, verifies that none of the required fields are empty, and dynamically updates the table text content before making the table visible.

```
function submitForm()
{
    var name=document.getElementById("name").value;
    var age=document.getElementById("age").value;
    var prn=document.getElementById("prn").value;
    var contact=document.getElementById("contact").value;
    var email=document.getElementById("email").value;
    var address=document.getElementById("address").value;

    if(name==" " || age==" " || prn==" " || contact==" " || email==" " || address==" ")
    {
        alert("Please fill all the fields.");
        return;
    }

    document.getElementById("rname").innerHTML=name;
    document.getElementById("rage").innerHTML=age;
    document.getElementById("rprn").innerHTML=prn;
    document.getElementById("rcontact").innerHTML=contact;
    document.getElementById("remail").innerHTML=email;
    document.getElementById("raddress").innerHTML=address;

    document.getElementById("result").style.display="table";

    alert("Form Submitted Successfully");
}
```

Output

1. **Initial State:** The user is presented with a centered gradient portal containing form inputs for Name, Age, PRN, Contact Number, Email, and Address. The result table remains hidden (`display: none`).
2. **Validation Feedback:** If any field is left empty when clicking the **Submit** button, a browser alert displays `"Please fill all the fields."` and execution halts.
3. **Successful Submission:** When all inputs are provided, an alert displays `"Form Submitted Successfully"`, the results table is revealed with `display: table`, and every submitted field is rendered into its corresponding table row.

Screenshot

The screenshot shows a web browser window with the address bar displaying the file path: C:/Users/sanku/OneDrive/Desktop/24070521058_Javascript/EXP1/index.html. The main content area features a dark blue background with a white rectangular form in the center. The form is titled "Welcome to SIT NAGPUR" in bold black text, with "Student Information Form" in smaller text below it. The form contains six input fields, each with a label above it: "Enter Name:", "Enter Age:", "Enter PRN:", "Enter Contact Number:", "Enter Email:", and "Enter Address:". Each input field has a light gray placeholder text. At the bottom of the form is a blue "Submit" button.

Student Registration Portal Output

Result / Conclusion

Experiment 1 was successfully implemented and verified. The experiment demonstrates foundational web development principles in JavaScript, including retrieving values from form controls using `document.getElementById().value`, validating input completeness, manipulating element visibility via the style object (`style.display = "table"`), and updating DOM text content using `.innerHTML`.
